2026

THE PROBLEM

Drivers need guidance.

Every day, drivers face moments of uncertainty.
The result is devastating.

1.35M

road deaths / year

90%

caused by human error

50M

injuries annually

THE SOLUTION

Real-time AR driving guidance.

Videmus uses Computer Vision to observe the road in real time and project AR guidance overlays into the driver's field of view. The driver stays in full control — we make them better, not replace them.

Parking

AR arrows guide the car into tight spaces with precision.

Pedestrian Safety

Real-time detection warns the driver before a dangerous situation.

Traffic Navigation

The system reads traffic lights and guides with AR overlays.

From camera to guidance.

01

Capture

Camera captures the road environment in real time through AR glasses or phone

02

Detect

YOLO-based Computer Vision model identifies traffic lights, pedestrians, and parking spaces

03

Analyze

System evaluates the situation and determines the optimal driver action

04

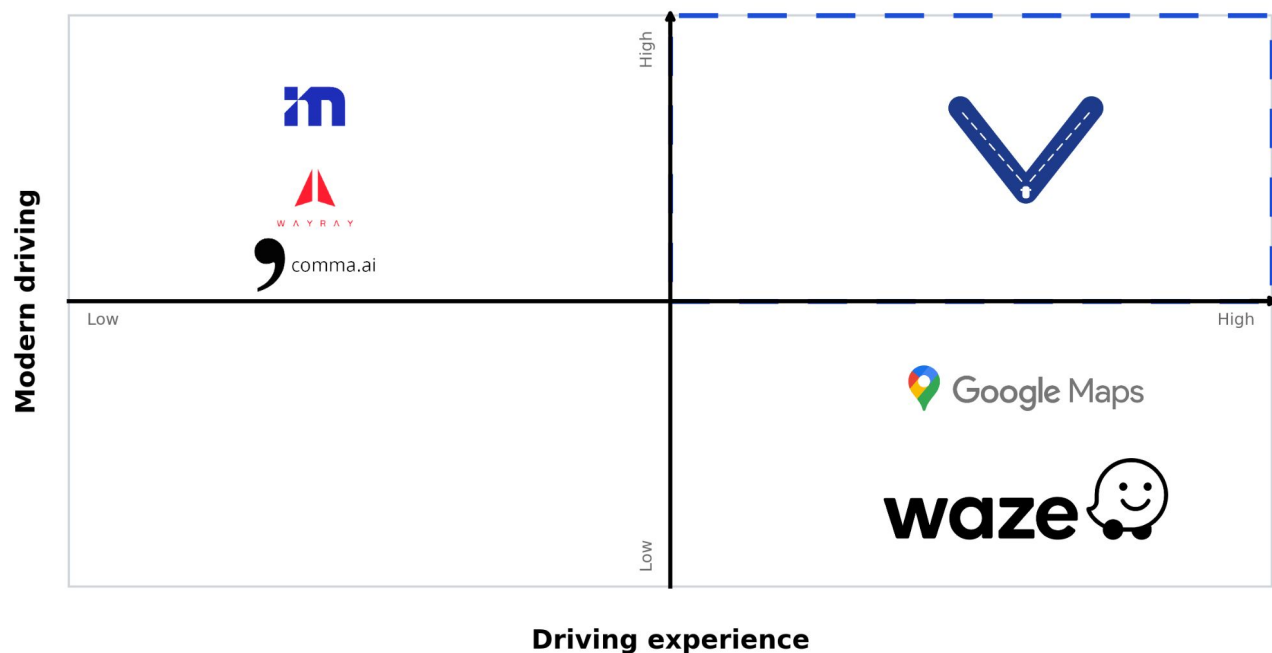

Guide

AR overlay projects visual guidance directly into the driver's field of view

DIFFERENTIATION

We coach. They replace.

Videmus occupies a unique position: enhancing the human driver with modern technology rather than replacing them.

Start small. Scale smart.

NOW

Phase 1

Baseline Models

Develop and train CV models for traffic light, pedestrian, and parking detection.

NEXT

Phase 2

App Integration

Integrate models into a mobile application for real-time driving guidance.

THEN

Phase 3

Driving Schools

Partner with driving schools for testing and validation in controlled environments.

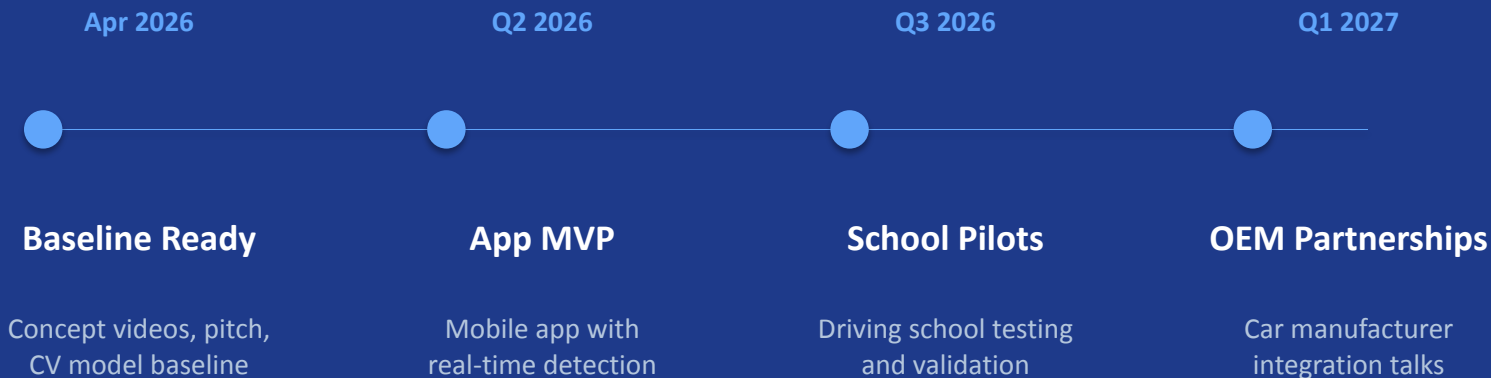

FUTURE

Phase 4

OEM Integration

Seek partnerships with car manufacturers for factory-installed systems.

Built for the future. Starting today.

The right people for the mission.

What we've built so far.

Brand & Identity

Logo, visual identity, and motto established.

Concept Videos

Three AR guidance demos produced: parking, pedestrian, and traffic light scenarios.

Baseline Model

YOLOv8 trained on traffic light detection dataset.
Validated on real driving footage - [GITHUB](#)

Competition Selected

Finalist in Sofia pitch competition with guaranteed prize and HP advisor assigned.

Incubator Pipeline

Application prepared for Constructor Start

Website

Creation of website for the product -
